In statistics, ordinary least squares (OLS) is a type of linear least squares method for estimating the unknown parameters in a linear regression model. OLS chooses the parameters of a linear function of a set of explanatory variables by the principle of least squares: minimizing the sum of the squares of the differences between the observed dependent variable (values of the variable being ...

Bessel functions, first defined by the mathematician Daniel Bernoulli and then generalized by Friedrich Bessel, are the canonical solutions $y(x)$ of Bessel's differential equation $x^2 y'' + x y' + (x^2 - \nu^2) y = 0$ for an arbitrary complex number ν , the order of the Bessel function. Although ν and $-\nu$ produce the same differential equation for real ν , it is conventional to define different Bessel functions for ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Microwave Scattering from the Sea 119 As seen above for the special case of a smooth flat surface, the incident energy is reflected into the specular direction (or dissipated in the medium).
