Biological Nutrient Removal Processes

Sewage treatment is the process of removing contaminants from municipal wastewater, containing mainly household sewage plus some industrial wastewater. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safe enough for release into the environment. A by-product of sewage treatment is a semi-solid waste or ...

Sewage treatment - Wikipedia

Introduction Biological treatment is an important and integral part of any wastewater treatment plant that treats wastewater from either municipality or industry ...

Biological Wastewater Treatment

Proper management of the nitrogen cycle is a vital element of a successful aquarium. Excretia and other decomposing organic matter produce ammonia which is highly toxic to fish. Bacterial processes oxidize this ammonia into the slightly less toxic nitrites, and these are in turn oxidized to form the much less toxic nitrates. In the natural environment these nitrates are subsequently taken up by ...

Filter (aquarium) - Wikipedia

Organic compounds decomposing in high temperature and pressure of a steam boiler plant water "steam cycle result in low molecular weight (LMW) organic acids and carbon dioxide.

Removal of total organic carbon (TOC) residues from power

2 small package plants being used today. These plants are capable of producing a high quality effluent for the price. Other advantages of the activated sludge process are

Explaining the Activated Sludge Process

This Activated Sludge Training Manual was prepared by the Michigan Department of Environmental Quality, Operator Training staff. It is intended to be used as an aid in the presentation of the MDEQ Activated

Activated Sludge Process Control Manual - michigan.gov

Fourteenth International Water Technology Conference, IWTC 14 2010, Cairo, Egypt 459 THE EFFECT OF USING MICROORGANISMS ON SLUDGE REDUCTION IN WASTEWATER TREATMENT PLANT

THE EFFECT OF USING MICROORGANISMS ON SLUDGE REDUCTION IN

Landfill leachate treatment is a challenge due to the high and variable concentrations of dissolved solids, organics, heavy metals and xenobiotic organics.

Successful landfill leachate treatment

Phosphorus is a non-renewable resource for food production in modern agriculture and a leading cause of eutrophication in water bodies. Both the removal and recovery of phosphorus from water/wastewater are important.

Removal and recovery of phosphate from water by activated

PREFACE Water Matters: research with a view to a practical application. In front of you is the seventh edition of Water Matters, the knowledge magazine of the journal H 2 O. You will find ten articles about a variety of subjects, written by Dutch water professionals on the basis of thorough research.
