A blood film or peripheral blood smear is a thin layer of blood smeared on a glass microscope slide and then stained in such a way as to allow the various blood cells to be examined microscopically. Blood films are examined in the investigation of hematological (blood) disorders and are routinely employed to look for blood parasites, such as those of malaria and filariasis

Etymology. The name "white blood cell" derives from the physical appearance of a blood sample after centrifugation. White cells are found in the buffy coat, a thin, typically white layer of nucleated cells between the sedimented red blood cells and the blood plasma. The scientific term leukocyte directly reflects its description. It is derived from the Greek roots leuk-meaning "white" and cyt ...

Systems that increase the rate of exchange Fick's law shows that for a fast rate of diffusion you must have a large surface area, a small distance between the source & the destination, and maintain a high concentration gradient. All large organisms have developed systems that are well-adapted to achieving these goals, as this table

Homeworld. The Homeworld of the Blood Angels is the planet Baal and its two moons are, Baal Primus and Baal Secundus - from which the Blood Angels take their new recruits. The Blood Angels' Primarch Sanguinius fell upon Baal Secundus after he and his brother Primarchs were scattered across the galaxy. In ancient days Baal and its moons had Terra-like atmospheres.
